Definitive Ratings

Total		£163.8	100.0					
Z	Not rated	£32.1	19.6	April 2039	3mL+3.25%	0.0%	0.0%	0.0%
Α	Aaa(sf)	£131.7	80.4	April 2039	3mL+2.75%	19.6%	3.0%	22.6%
Series	Rating	Amount (million)	% of Notes/	Legal Final Maturity	Coupon	Subordi- nation*	Reserve Fund**	Total Credit Enhance- ment***

The rating addresses the expected loss posed to investors by the legal final maturity. In Moody's opinion the structure allows for timely payment of interest and ultimate payment of principal at par on or before the rated final legal maturity date. Moody's ratings address only the credit risks associated with the transaction. Other non-credit risks have not been addressed, but may have a significant effect on yield to investors.

- * At close.
- ** As a % of total notes
- *** No benefit attributed to excess spread.

V Score for the UK BTL sector:	Medium/High
V Score for the subject transaction:	Medium/High

The subject transaction is a static cash securitisation of buy-to-let mortgages extended to obligors located in England and Wales. Following close and in line with the relevant conditions £35.3 million of prefunded loans were added in the six months following close (equal to 21.5% of the principal amount of the notes issued).

Asset Summary (£128.5 million Provisional pool cut-off date as of 01/11/2011*)

Seller(s)/originator(s):	Paragon Mortgages (2010) Limited (subsidiary of Paragon)			
Servicer(s):	Moorgate Asset Administration Limited (subsidiary of Paragon)			
Receivables:	First ranking buy-to-let mortgage loans to individuals and corporate borrowers secured by property located in England and Wales.			
Methodologies Used:	» Moody's Approach to Rating RMBS in Europe, Middle East and Africa, October 2009 (SF141262)

RESIDENTIAL MBS

Asset Summary (Continued)

Models Used:	MILAN (UK settings) & ABSROM			
Total Amount:	£163.8 million comprised of:			
	(i) £ 128.5 million of mortgage loans completed by the 1st of November 2011,			
	(ii) £35.3 million of pre-funded loans completed by the second interest payment date			
Length of Revolving Period:	Static, following the addition of prefunded loans by the second interest payment date.			
Number of Borrowers:	594			
WA Remaining Term:	20.0 years			
WA Seasoning:	4.84 months			
Interest Basis:	36.3% fixed rate up to October 2013, 63.7% floating rate loans indexed to LIBOR			
WA Current LTV:	69.8%			
WA Original LTV:	70.0%			
Moody's calculated WA indexed LTV:	69.6%			
Borrower credit profile:	100% prime borrowers			
Delinquency Status:				
Less than 30 days in arrears	0.5%			
Greater than 30 days in arrears	Nil			
Borrower concentration:				
Top 10 borrower concentration	7.3%			
Top 20 borrower concentration	12.9%			

^{*}The asset summary is computed from the pool as supplied to Moody's at close prior to prefunding. Please see the Benchmark Table on page 21 for the pool following the second period of prefunding in March 2012.

Liabilities, Credit Enhancement and Liquidity

Excess Spread At Closing:	1.5% annualised excess spread at closing. A portion of this excess spread - after payment of the administrator subordinated fee and the issue servicers provider fees - will be available to provide additional funds to repay the Class A Notes should they not be called at the call option date in October 2014.
Credit Enhancement/Reserves:	1.5% Excess spread 3.0% Non-amortising reserve fund (First Loss Fund) at close, building up to 4.0% of closing note balance in the event where (i) 60 days + arrears exceed 3% or (ii) cumulative losses exceed 2% of the original notes' balance. Subordination of the Class Z notes
Form of Liquidity:	Principal to pay interest mechanism. Margin reserve to cover negative drag from prefunding and reserve fund. 3.0% of the Class A Notes outstanding is ring-fenced within the Reserve Fund for the payment of interest on the Class A Notes and senior expenses. There is a shortfall fund to which the subordinated lender can credit funds so that it can meet the minimum margin requirements without increasing SVR.
Number of Interest Payments Covered by Liquidity:	Liquidity covers the equivalent of 5.3 months interest payments at a Libor of 5.7%. Interest payments are made quarterly so this is equivalent to more than one quarterly payment.
Interest Payments:	Quarterly in arrears on each payment date
Principal Payments:	Quarterly pass-through on each payment date
Payment Dates:	15 th of January, April, July and October First payment date: 16 January 2012
Hedging Arrangements:	There is a non balance guaranteed swap for the fixed loans but no swap for the mismatch between Libor index on the mortgages and Libor index on the notes and no swap between mortgage SVR and note Libor.

Counterparties

Jeanney.	Davagen Martgages (No. 16) DLC
Issuer:	Paragon Mortgages (No. 16) PLC
Sellers/Originators:	Paragon Mortgages (2010) Limited, an wholly owned subsidiary of Paragon (Not rated)
Contractual Servicer(s):	Moorgate Asset Administration Limited (Not rated) (a Paragon Group company)
Sub-Servicer(s):	Mortgage Trust Services PLC (Not rated) (a Paragon Group company)
Back-up Servicer(s):	Homeloan Management Limited (Not rated), owned by Skipton Building Society (Ba1 / NP)
Back-up Servicer Facilitator:	Structured Finance Management Limited (Not rated)

Subordinated Lender	Paragon Finance PLC

Moody's View

Outlook for the Sector:	No Buy-to-Let sector specific outlook. Outlook is negative for UK Non-Conforming and stable, deteriorating for UK Prime
Unique Feature:	Collateral: 21.5% Prefunding in the deal 51.25% of loans in the provisional pool are initially interest only but revert to repayment.
Degree of Linkage to Originator:	Originator group companies performs servicing and cash bond management replacement although a backup has been appointed at close.
Originator's Securitisation History:	
# of Precedent Transactions in Sector:	21
% of Book Securitised:	82%
Behaviour of Precedent Transactions:	 Performance of Paragon transactions has been consistently better than the buy-to-let residential sector average. Due to the downturn in the UK housing market in November 2010, as part of its BTL portfolio review, Moody's increased its expected loss in all nine of Paragon's deals which closed since May 2004. The
	MILAN Aaa CE were not increased. No downgrades on any rated debt, although Moody's placed the nine outstanding Paragon deals on review for possible downgrade on 14 October 2011 due to concerns on operational risk following the downgrade of Skipton Building Society. In each of these previous deals HML is the back-up servicer and back-up cash manger and the main servicer is not rated by Moody's. Moody's has been informed by Paragon that it is in the process of restructuring the transactions. In particular, the restructuring proposal includes the addition of a back-up servicer facilitator as well as the incorporation of estimation language in the transaction documents to ensure continuity of payments in case of servicer disruption.
Key Differences between Subject and Precedent Transactions:	Assets: Mortgages revert to SVR rather than Libor rate Lower overall LTV's
	51.25% of loans in the provisional pool are initially interest only but revert to repayment at year 5. Liabilities: Liquidity amount of reserve fund is available from close (in previous deals this is following breach of an
	arrears trigger). Inclusion of unrated Z Notes
Portfolio Polativo Porformanco	A back up servicer facilitator is present and the transaction contains estimation language.
Portfolio Relative Performance:	2.00/ higher than prior Paragon transactions due to ricks connected to high herrower concentration
Expected Loss/Ranking: MILAN Aaa CE/Ranking:	3.0% - higher than prior Paragon transactions due to risks connected to high borrower concentration. 20.5% - higher than peer group due to borrower concentration risk.
Weighted-Average Aaa Stress Rate For House Prices for a benchmark loan:	48.7%
Potential Rating Sensitivity:	
Chart Interpretation:	At the time the rating was assigned, the model output indicated that Class A would have achieved a Aaa rating even if the expected loss was as high as 9% assuming MILAN Aaa CE remained at 20.5% and all other factors were constant.

TABLE 1*:

Tranche A

MILAN Aaa CE Output

		20.5%	24.6%	28.7%	32.8%
Median	3.0%	Aaa*	Aa1(1)	Aa1(1)	Aa1(1)
Expected	4.5%	Aaa(0)	Aa1(1)	Aa1(1)	Aa2(2)
Loss	6.0%	Aaa(0)	Aa1(1)	Aa2(2)	Aa3(3)
	9.0%	Aaa(0)	Aa1(1)	Aa3(3)	A1(4)

^{*} Results under base case assumptions indicated by asterisk ' * '. Change in model-indicated rating (# of notches) is noted in parentheses.

	1.3	Sector's Historical Downgrade Rate	М	М	» Same as sector score
2		r/Sponsor/Originator Historical Data Adequacy, ormance Variability and Quality of Disclosure	M/H	М	
	2.1	Quality of Historical Data for the Issuer/Sponsor/Originator	М/Н	М	 The originator provided: Loan by loan data on 1,235 loans which had been repossessed between 2003 and 2011 Roll rates between arrears buckets for the period 2007 and 2011 Three month arrears and loss vintage data spli by quarter since 1996. Vintage data on performance in the last recession was not available.
	2.2	Issuer/Sponsor/Originator's Historical Performance Variability	М	L/M	 Performance of Paragon transactions has beer better than the buy-to-let sector average. Due to the downturn in the UK housing marke in November 2010, as part of its BTL portfolio review, Moody's increased its expected loss in all nine of Paragon's deals which closed since May 2004. The MILAN Aaa CE were not increased. No downgrades on any rated debt. Moody's placed the nine outstanding Paragon deals on review for possible downgrade on 14 October 2011 due to concerns on operational risk following the downgrade of Skipton Building Society from Baa1/P-2 to Ba1/NP. Moody's has been informed by Paragon that it in the process of restructuring the transaction
	2.3	Disclosure of Securitisation Collateral Pool Characteristics	L/M	L/M	» All key data fields provided in addition to data on year of construction, number of properties owned by the borrower, borrower age and firs time buyer flag. Moody's has seen a draft AUP report which is in line with expectations.
	2.4	Disclosure of Securitisation Performance	L/M	L/M	 The administration agreement has a list of items which the investor report will contain be it is not presented in the final format. The investor report is broadly in line with other deals.
,	Com	plexity and Market Value Sensitivity	М	M/H	
	3.1	Transaction Complexity	М	М	 This is a stand-alone transaction which is in lir with other deals from originators of a similar size to Paragon. No substitution allowed but prefunding and further advances present. Triggers for reserve fund build up and pro rata triggers present.

Brea	kdown of	the V Scores Assigned to	UK BTL RMBS Sector	Trans- action	Remarks
	3.2	Analytic Complexity	L/M	M/H	 Standard asset and cash flow models have been used to assess the transaction making the analysis less complex than master trusts. There is however: No swap in place for SVR loans No separate liquidity facility Higher than average borrower concentration meaning that performance may be more volatile than a less concentrated pool. Around 20% prefunding meaning the final pool changed post closing. Issuer is a subsidiary of Paragon and also part of two Paragon tax groups and of the Paragon VAT group.
	3.3	Market Value Sensitivity	L/M	L/M	» The assets are secured financial assets where the underlying properties have a reasonably liquid secondary market.
4	Governance			M/H	
	4.1	Experience of, Arrangements Among and Oversight of Transaction Parties	М	L/M	» Originator and servicer has over 10 years experience of securitisations that have been publicly sold.
	4.2	Back-up Servicer Arrangement	М	М	 Servicer is not rated but there is a warm back-up for the servicer and cash manager appointed at close. There is also a back up servicer facilitator appointed at close. The back-up servicer and cash manager has the right to resign after 12 months even if no other back-up servicer has been found.
	4.3	Alignment of Interests	M/H	M/H	» Class Z Notes held by Paragon at close. Paragon also covenants to retain 5% minimum interest for the life of the deal
	4.4	Legal, Regulatory, or Other Uncertainty	L/M	M/H	 The issuer being part of the Paragon tax group and a subsidiary of Paragon creates a risk on the insolvency remoteness – see page 19 for more details. Notes are limited recourse so recent Eurosail Court of Appeal judgment in BNP Corporate Trustee Services Ltd v Eurosail UK 2007-3BL PLC concerning the effect of post enforcement call options does not apply.

Strengths and Concerns

Strengths:

- Asset quality: The high quality of the collateral held in the pool. The contraction in lending in the UK mortgage market has been particularly pronounced in the buy-to-let sector and so from a lender's perspective it has been possible to tighten underwriting criteria so that weaker borrowers are excluded from new lending. Particular strengths include:
 - Low LTV's: Maximum LTV of loans included in the pool is 75% (before accounting for fees) compared with 85% for prior Paragon deals. For loans above £500k and £1,000k the LTV is restricted to 70% and 65% respectively. The average original, current and indexed LTV are all below 70% and this compares favourably with the overall buy-to-let market;
 - No borrowers have been subject to any bankruptcy individual voluntary arrangement or county court judgments.
 - Geographical concentration: 56.6% of the provisional pool is in London and the South-east, compared with a market average of around 37%.
 Recent surveys of the UK property market show that the London market is the most robust area in the country, followed by the South East.
 - Experience of Paragon in the buy-to-let sector:
 - Paragon's lending decision takes into account the value of the underlying property in the case of asset sale and the value of the underlying rental cashflows. Valuation reports include comparables on both the sale value and rental cashflows;
 - Senior management has 12 years experience on average;
 - The performance of existing Paragon deals has been better than the BTL sector average (please see "Benchmark Analysis" for more details).

Concerns and Mitigants:

Moody's committees particularly focused on the following factors, listed in order of those most likely to affect the ratings:

- borrower concentration: There were only 804 borrowers in the final pool of £163.5 million following prefunding with just 594 borrowers in the provisional pool of £128.5 million. This concentration risk means that the deal is potentially exposed to a significant loss if the performance of a small number of individuals is worse than expected; for example the top 20 borrowers accounted for 12.9% of the balance of the provisional pool although there was a representation that all the pre-funded loans were to new borrowers and so this did not increase in £-amount and reduced to 10.1% of the pool following prefunding. Moody's took this risk into account when determining the MILAN Aaa CE number and the expected loss for the pool. Please see "Treatment of concerns" for further details.
- » Operational Risk: Paragon is not rated by Moody's and group companies are the originator servicer and cash manager in the transaction. Additionally as the issuer is a subsidiary of Paragon, following an originator insolvency, there is the risk of the issuer becoming insolvent due to a potential exposure to pension liabilities. Please see treatment of concerns for more information on this.

The deal is therefore exposed to counterparty and operational risk.

- » In mitigation there is:
 - a warm back-up cash manager
 - a warm back-up servicer,
 - a back-up servicer facilitator,
 - the transaction has the equivalent of 5.3 months of liquidity
 - language in the transaction documents to enable payments to noteholders to be made using estimated amounts in the event of relevant information on cash balances not being available.
- » Please see treatment of concerns for more information on this.

» Absence of SVR swap and minimum margin requirement risk: The deal contains a commitment that the servicer must set the SVR rate so that the asset yield will be 4% above Libor pre October 2016 and 4.5% above Libor following this date or alternatively enhance the margins through drawings on the subordinated loan to credit the shortfall fund. The underlying mortgages state that a change in the lender's cost of funding is a reason why rates could be increased. However it is Moody's view that this will not be enforceable in all circumstances as it could be deemed unfair as the borrowers do not have power to renegotiate terms and there is no mention of proportionality.

As there is no swap in the deal to hedge SVR risk, the deal is exposed to the risk of the servicer being unable to set the SVR high enough to enable the margin conditions being met. Please see treatment of concerns for more details and an explanation of how Moody's has stressed the asset yield.

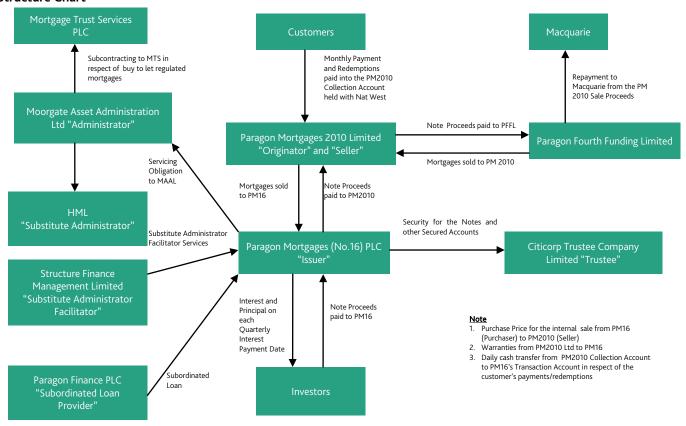

- Prefunding: Subject to certain conditions the structure allowed additional loans to be added in the six months following close. Prefunding in the deal was 21.5% of the principal amount of the notes issued, with £35.3 million of pre-funded loans added by March 2012. This introduced additional risks as the asset quality could have deteriorated compared to that at close. In mitigation there were a number of performance criteria linked to asset quality, borrower concentration and transaction performance which were met prior to the loans being added. The majority of the pre funding reserve was used to purchase new mortgages, with only £5,815 forming part of March 2012 available redemption funds. Please see "Treatment of concerns" for further details.
- » Vintage concentration: The performance of a pool of loans originated over a short period years is more volatile than one spread over a number of years. Over 90% of the loans in the provisional portfolio have been originated in the eight months to September 2011, with the prefunded loans all requiring to be originated before the second interest payment date falling in April

- 2012. The vintage concentration risk is compounded in the case of this deal as the majority of the borrowers are significantly exposed to the real estate sector. Additionally 51.25% of loans in the provisional pool will switch to repayment after five years and so all these loans will experience a payment shock at the same time. Should there be limited opportunities for refinancing, borrowers with loans reverting to repayment would all be exposed to the same risk at the same time. Moody's has taken this into account by the absence of seasoning credit and penalising all loans which were not repayment in the provisional pool with the standard 25% MILAN penalty for interest only loans.
- Receiver of rent: Paragon has used receiver of rent as means of controlling arrears and losses since 1999. Moody's believes that should the buy-to-let market weaken significantly that this could lead to an increase in loss severities. This would follow as in a severe recession a receiver of rent may be unable to successfully re-let a vacant property and so repossession would occur in any case but with a lag and an increased loss severity. Additionally this is an operationally more complex method of resolving payment problems compared with attempting to foreclosure sooner which could be compounded in cases where the servicer itself is under financial pressure. Finally due to the large holdings of some of the borrowers in the pool and the likelihood of a borrower defaulting on all his or her debt obligations at the same time there is the requirement for the receiver of rent to respond to peaks of local demand. In today's less severe economic scenario, this has yielded positive results to date with Paragon performance metrics comparing favourably to the sector average. This is due to rental demand increasing as tight credit conditions prevents would be first time buyers from purchasing a property in combination with the lower repossession timings seen to date compared with a standard enforcement procedure. Moody's MILAN and Expected loss numbers take the use of receiver of rent into account.

Structure, Legal Aspects and Associated Risks

CHART 1

Structure Chart

Allocation of payments/pre accelerated revenue waterfall:

On each quarterly payment date, the issuer's available funds (i.e. interest amounts received from the portfolio, the reserve fund, and interest earned on the issuer's account) will be applied in the following simplified order of priority:

- 1. Senior expenses & senior administration fee;
- 2. Payments to the Swap counterparty;
- 3. Interest on Class A;
- 4. PDL on Class A;
- 5. Issuer Profit;
- 6. First Loss Fund replenishment;
- 7. Payments due to third parties;
- 8. Interest on Class Z (until October 2014);
- 9. Junior administration fees;
- 10. Excess spread to pay down Class A Notes after call option date in October 2014;
- 11. Interest on Class Z (from October 2014 onwards); and
- 12. Amounts due on the Subordinated Loan.

Allocation of payments/pre-accelerated principal waterfall:

On each quarterly payment date, the principal amounts received from the portfolio, unutilised amounts from the prefunding reserve and amounts applied to clear PDL will be applied in the following simplified order of priority:

- 1. If needed, to replenish the First Loss Fund up to the Liquidity Amount;
- 2. Provided that the release from the Margin Reserve Fund and the First Loss Liquidity Excess Amount are not sufficient to cover the senior expenses and interest shortfalls in items 1 to 6 of the revenue waterfall, to cover the potential shortfalls in items 1 to 3;
- 3. Principal payments in sequential order:
 - To redeem the Class A Notes until repaid in full;
 - To redeem the Class Z Notes until repaid in full;

Allocation of payments/PDL-like mechanism:

PDL is recorded when there is 1) realised losses 2) replenishment of the First Loss Fund up to the Liquidity Amount (as defined below) and 3) use of principal to cover potential interest shortfalls. A realised loss is defined as the

difference between the outstanding amount of the loan and any proceeds after the foreclosure of a mortgage loans.

The issuer is a subsidiary of The Paragon Group:

- » The Issuer is a special purpose vehicle incorporated in England and ultimately 100% owned by The Paragon Group of Companies PLC. Typically, UK RMBS transactions rated by Moody's have featured an orphan SPV as issuer. The fact that the Issuer is not an orphan company introduces additional risks not typically found in UK RMBS transactions:
 - As a matter of UK tax law, it is possible that a subsidiary can be fixed with liabilities for tax of another member of its group. In this case, Moody's expects that an extensive range of undertakings will provide assurance that the chance of such secondary liabilities arising is remote.
 - A company organised in the UK can be wound up by a shareholders' resolution. Whilst, in the circumstances, there might be little advantage to be gained by a liquidator of the Issuer's parent company by doing this, Moody's stress scenarios envisage such an attempt being made. There could be claims due to, for example, tax or pensions claims. Please see Treatment of concerns Operational Risk tax and pension claims in page 19 for more details.
 - Moody's believes that the issuer's status as a securitisation company taxable under the permanent tax regime is not affected by the fact that it is a member of a group of companies for tax purposes.

The issuer is part of The Paragon VAT Group

» In common with other Paragon transactions rated by Moody's (see the previous "Paragon Mortgages" deals), but unlike the vast majority of UK RMBS transactions,

- the Issuer is grouped with the rest of the Paragon Group for VAT purposes. The VAT grouping means that services or goods provided between members of the VAT group are not subject to VAT (which would otherwise be payable on servicing fees); but, as a consequence, each member of the VAT group is jointly and severally liable for VAT liabilities of all other members of that group. A long standing arrangement is in place to mitigate this risk:
- A Trust Account, held in the name of Citicorp Trustee Company Limited as trustee with National Westminster Bank Plc (A2, on review for possible downgrade / P-1, on review for possible downgrade), can be used by any member of the VAT group to meet group VAT liabilities should PFPLC (which, as representative member, is primarily liable for group VAT) fail to do so. PFPLC must maintain a minimum balance in the Trust Account equal to the greater of (1) £ 120,000, (2)1.2 times the actual VAT liability for the Paragon VAT Group in the last two accounting periods, or (3) 1.2 times the sum of the estimated VAT liabilities of the Paragon VAT Group for the current and next succeeding accounting periods.
- » 2) If PFPLC fails to pay VAT due by it, or fails to maintain the minimum balance in the Trust Account), the Issuer will automatically be de-grouped; on a degrouping, no new VAT liabilities will arise but any that exist remain. The VAT authority cannot prevent a company from de-grouping, but it must be given 90 days' prior notice. There is no legal opinion on the VAT declaration of trust.
- » Additionally, Moody's has run scenario analysis assuming that the issuer is required to pay group VAT costs.

Performance	Performance Triggers						
Trigger	Conditions	Remedies/Cure					
Pre-funding	Moody's does not affirm that the purchase of the additional mortgage loans does not adversely affect the then current rating of the notes; or WA LTV of the pool is more than 70.5%; or Weighted interest coverage ratio on the portfolio is less than 152%; or The top 20 borrowers make up more than £16,563,190; or Prefunded loans are not made to unique borrowers	The se conditions were met and so £35.3 million of prefunded loans were added by March 2012. There was only £5,815 standing to the credit of the pre-funding reserve which will be used as principal to pay down the notes on the second IPD					
Reserve Fund Build-up	The arrears level (defined as the percentage of loans that are more than 60 days in arrears) exceeds 3.0% or Cumulative losses exceed 2.0%	If one of the conditions is met, the Reserve Fund will build up from 3.0% to 4.0% of the initial note balance.					
Stop Further Advance (FA)	The Reserve Fund is not at its required amount or Amount of FA is greater than 16% of original pool balance Following the FA, the average LTV is not more than 1% above the average LTV as determined on the second PDD. 90 day arrears is greater than 2.00% The loan subject to FA has been delinquent at least once over the previous three months PDL greater than zero following any application of subordinated loan drawdown.	No further advance allowed					

Reserve Fund: The Reserve Fund (First Loss Fund) was fully funded at closing from the Subordinated Loan and non-amortising: £4,914,000, i.e. 3.0% of the initial note balance.

The reserve fund will be replenished before the interest payment on the Class Z notes.

If at any time, more than 3.0% of the mortgages are more than 2 months in arrears (**Arrears Trigger**), or if cumulative losses are greater than 2.0% (**Loss Trigger**), the Required Amount of the First Loss Fund will increase from 3.0% to 4.0% of the original notes' balance through the capture of excess spread and drawings on the Subordinated Loan, and will have to be maintained at that level thereafter.

Moody's gives benefit to the Loss trigger but not to the Arrears Trigger in its cashflow analysis.

While the Class A Notes are outstanding, 3.0% of the outstanding balance of such notes will only be available to pay senior fees and note interest and so is not available to cover losses.

Moody's considers that the reserve fund in this transaction is slightly weaker than other comparable UK RMBS transactions as it can also be used for liquidity purposes.

Margin Reserve Fund: the Margin Reserve Fund was funded at closing from the Subordinated Loan to an amount equal to £492,355, i.e. 0.30% of the original notes' balance. It will be distributed as part of the revenue waterfall over the first two interest payment dates. In the event where the teaser period interest of the prefunded loans to be included in the deal is lower than Libor + 3.5%, the Margin Reserve Fund will be topped up by the difference between Libor + 3.5% and the actual teaser rate.

Liquidity:

- » Principal to pay interest mechanism: principal receipts under the mortgage loans will be available to cover potential interest shortfalls via item 2 of the principal waterfall.
- The Liquidity Reserve is a further source of liquidity: the Liquidity Amount (included as part of the First Loss Fund requirement) is equal to 3.0% of the outstanding Class A Notes and can be used to cover any remaining potential interest shortfalls in items 1 to 3 of the revenue waterfall after application of the Margin Reserve Fund and the First Loss Liquidity Excess Amount.
- » Moody's considers that the first loss liquidity excess reserve fund in this transaction is slightly stronger than previous Paragon transactions as it is not dependent on an arrears trigger and so will always be available for liquidity purposes if funded.

Assets:

Asset transfer:

» True Sale by way of equitable assignment

Borrower concentration:

» As discussed in treatment of concerns on page 18 the top 20 borrowers account for 12.89% of the balance of the provisional pool which is expected to reduce to less than 11% of the final £163.8 million pool.

Interest-Only Loans:

There are 90.41% interest-only loans in the provisional pool at close, including 51.25% of loans, which revert to repayment after 5 years. The remainder (39.15%) of loans are interest-only for life. Moody's applied the standard 25% interest-only MILAN penalty to all loans which are not repayment at close.

Mitigant:

- » Moody's has conducted a borrower-by-borrower analysis of these loans and has concluded that the credit risk from the largest borrowers in the pool is in line with the pool has a whole. The credit score from Paragon's bespoke scorecard is in line with the overall pool, with 19 out the top 20 borrowers being self employed.
- None of the borrowers had been in arrears in the previous
 24 months or since date of origination if more recent.
- The borrowers had been at their current address for over 10 years on average.

Interest rate mismatch:

- » Fixed-Floating mismatch: At closing, 36.28% of the provisional pool balance includes fixed rate mortgages, which will revert to Paragon's standard variable rate between November 2011 and October 2013. The notes pay three-month sterling LIBOR which leads to an interest rate mismatch in the transaction.
- » Base rate mismatch: Upon reversion, 100% of the pool balance will be exposed to the risk of variance between Paragon's standard variable rate (received on the mortgage loans) and three-month sterling LIBOR payable on the notes.

Mitigant:

- » To mitigate the fixed-floating rate mismatch, the issuer has entered into a swap agreement with Macquarie Bank Limited, London Branch which matures in October 2013 once all fixed rate loans have rolled off. Under the swap agreement:
- » During the term of the fixed rate loans, the issuer will pay a weighted average fixed swap rate of 1.57% in all periods other than 1.55% in April 2013, 1.36% in June 2013,

1.14% in July and August 2013 and 1.12% in September 2013.

- » The swap counterparty will pay three-month sterling Libor.
- » The notional is fixed until January 2013 and then decreases until September 2013 - in accordance with an amortization schedule, meaning that it will potentially deviate from the outstanding fixed-rate loan balance over time should prepayments or defaults occur before October 2013.
- » This deviation risk is however limited by the fact that fixed-rate mortgage currently face a 5% early repayment penalty until October 2013.
- The transaction is unhedged with respect to standard variable rate loans. Instead, as in previous Paragon transactions, this transaction will benefit from a Minimum Margin Rate ("MMR") which provides some guarantee as to the amount of excess spread that will be available. Under the MMR, the servicer will have to set the rate on the variable rate mortgages in the pool or alternatively enhance the margins through drawings on the Subordinated Loan so as to ensure that the weighted average interest of the pool plus income from early redemptions and any other income received by the issuer is at least 4.0% over the Libor rate applicable to the note prior to the call option date and 4.5% after the call option date.
- » During the discount period of the loans the MMR is collateralised, however to account for the fact that the legal opinion does not give any definitive opinion in relation to the enforceability of the MMR, Moody's has haircut the available spread after this period (around 2 years after close by 1%).

Cash Commingling: All of the payments under the loans in this pool are collected by National Westminster Bank Plc under a direct debit scheme into the collection account in the name of the Seller.

Mitigant:

- » There is a declaration of trust over the account in favour of the Issuer.
- Payments are transferred daily to the issuer account in the name of the SPV held by National Westminster Bank Plc (A2, on review for possible downgrade / P-1, on review for possible downgrade).

Loan substitution: No substitutions are allowed.

Loan conversion: No loan conversions are allowed.

Further Advance: The Seller can grant further advances to the loans already in the pool, which may give rise to liquidity concern for the pool.

Mitigant: The key eligibility criteria for further advances are as follows:

- » The Lending guidelines are satisfied.
- » The various triggers in the "Performance Triggers" section continue to be met.
- » The same hedging arrangement must be in place as for the closing pool.

Moody's considers that the triggers and criteria for adding further advances in the Paragon Mortgages (No. 16) Plc pool is in line with the criteria seen in other UK buy-to-let RMBS transactions.

Moody's has applied a penalty of 0.50% to the MILAN Aaa CE number to take into account the risk associated with the LTV in the portfolio increasing to the higher weighted average LTV limit (70.5%).

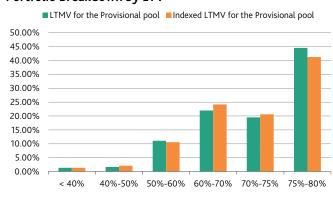

CHART 4

Portfolio Breakdown by ICR

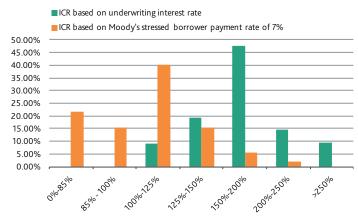

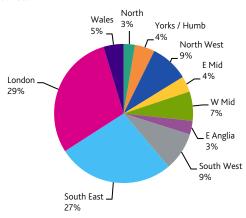

CHART 5

Portfolio Breakdown by Geography

Product Description: The assets backing the notes are first-ranking prime buy-to-let mortgage loans originated by Paragon Mortgages (2010) Limited under the Paragon brand. All the loans in the pool are secured on residential properties located in the UK.

Eligibility Criteria: The key eligibility criteria are as follows:

- » Each loan constitutes a valid and binding obligation of the borrower, and is a first legal charge over the property;
- » The properties are located in England and Wales and do not have agricultural restrictions and are not construction loans;
- The maximum initial mortgage term is 25 years and the minimum term is 5 years;
- » The final maturity date is not later than 2037;
- » Prior to making an initial mortgage loan, a valuation is made either by a valuation by the Seller's valuer or a

- valuer appointed on the Seller's behalf. Further advances may be made using indexed valuations;
- » No loans will be included in the portfolio where total lending to the borrower by Paragon is greater than £5,000,000;
- » All borrowers were at least 18 years old at the origination date of the mortgage; and
- » Rental value is at least 125% of the reference rate multiplied by the loan balance, and at least 130% in the case of professional landlords.

The first monthly payment due has been paid by the borrower.

Special Situations:

» The portfolio consists of loans categorised by the Seller as being Buy-to-Let Loans.

RESIDENTIAL MBS

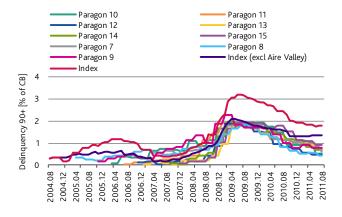

Credit Analysis

Precedent Transactions' Performance:

» The performance of the originator's precedent transactions in this sector are within Moody's expectations.

CHART 7

Losses for Paragon transactions

Source: Moody's Investors Service, Moody's Performance Data Service, periodic investor/servicer reports

Data Quantity and Content:

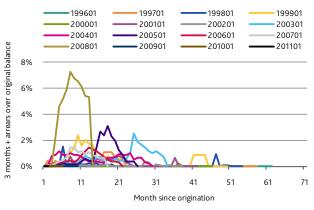

- » Moody's has received loan by loan data on 1,235 loans which were repossessed from 2003 through 2011.
- » In addition, Moody's has received meaningful information about 90+ Days arrears and loss vintage data split by quarter since 1996, along with roll rates between arrears buckets for the period running from 2007 to 2011.
- » In Moody's view, the quantity and quality of data received is appropriate compared to transactions which

have achieved high investment grade ratings in this sector.

Whole book vintage data was not available going back to the last recession.

CHART 8

Selected Vintage arrears data from Paragon's book

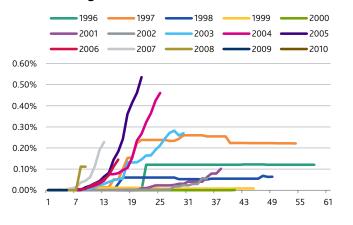

N.B: please note that the curve for the 200801 vintage arrears is not representative given that the sample size was very small in 2008 due to the warehouse closing in February that year.

Assumptions and definitions Other values within a range of the notional amount listed below may result in achieving the same ratings.

Assumptions	
Spread compression / margin analysis	Moody's has given partial credit to the minimum margin requirement and has haircut the yield by 1% in periods when it is not collateralised.
Stressed Fees	0.50% p.a. + £100,000 fixed fees
Definitions	
WA asset margin at closing	3.5% margin post swap at closing taking into account discount margin reserve.
WA asset margin after reset	All loans will revert to Paragon SVR.
Asset reset date	Fixed loans reset between November 2011 and October 2013
Liabilities reset date	Not applicable, although there is an optional call in October 2014
Interest on cash	Average rate for investment is currently 0.44%.
Actual Fees	0.15% p.a. + £8,000 fixed fees paid senior, a further 0.15% of servicing fee is paid junior in the waterfall.
PDL Definition	The Principal Deficiency Ledger records any losses on the assets and the application of any principal to meet any potential interest shortfalls.

Expected Loss:

The expected loss of 3.0% for this transaction (based on a £163.8 million pool including £35.3 million pre-funding) was obtained by benchmarking it with other securitisations of buy-to-let mortgages originated by UK mortgage originators and taking into account the high borrower concentration and the buy-to-let nature of the mortgages. In particular, Moody's assumed that the top 20 borrowers would not comprise more than 11.3% of the £163.8 million pool as per prefunding conditions. In the final pool the top 20 borrowers comprised 10.1% of the total pool.

Modelling Approach:

Loss Distribution: The first step in the analysis is to determine a loss distribution of the pool of mortgages to be

securitised. Due to the large number of loans and supporting historical data, Moody's uses a continuous distribution to approximate the loss distribution: the lognormal distribution.

In order to determine the shape of the curve, two parameters are needed: the expected loss and the volatility around this expected loss. These parameters are derived from two important sources: historical loss data and the loan-by-loan model.

Moody's uses performance data provided by the originator in addition to other relevant data in order to extrapolate expected losses for the loan pool. Examples of data include market and sector wide performance data, the performance of other securitisations, and other originators' data.

To obtain the volatility under "stressed" scenarios, Moody's takes into account historical data. However observed historical volatility may not be significant (given insufficient data points, or incomplete data), and in addition may not be representative for the future as it is based on the previous economic environments experienced.

Consequently, Moody's determines a number representing the enhancement that would be required for a pool of mortgages to obtain a rating consistent with Aaa under highly stressed conditions. This enhancement number (the "MILAN Aaa CE" number) is produced by using a loan-by-loan model, which looks at each loan in the pool individually and based on its individual characteristics such as LTV or other identified drivers of risk, will produce a benchmark CE number. This assumes stressed recovery rates (through house price decline), time to recovery, interest rates and costs to foreclosure. The weighted-average benchmark CE number will then be adjusted according to positive and negative characteristics of each loan or of the pool as a whole to produce the MILAN Aaa CE number.

Modelling assumption: The MILAN Aaa CE number and the expected loss number form the basis of Rating Committee discussions and are used to derive the lognormal distribution of the pool losses

The standard deviation of the distribution is found by setting the expected loss of the area of the lognormal distribution beyond the MILAN Aaa CE equal to the expected loss that is consistent with the idealised expected loss of a Aaa tranche.

Tranching of the Notes: Once the loss distribution of the pool under consideration has been computed, a cash flow model is used to assess the impact of structural features of the transaction. It calculates the average lives and the losses experienced by the notes for every loss scenario for the portfolio. Based on these numbers, the expected loss and the weighted-average lives for the notes are calculated as

weighted averages based on the probabilities of the respective scenarios. The expected loss on each tranche together with the notes' weighted-average life determines the rating, which is consistent with Moody's target losses for each rating category.

The rating of the notes is therefore based on an analysis of:

- » The characteristics of the mortgage pool backing the notes
- » The relative roll-rate levels and arrears in this type of lending compared to conventional lending
- » Sector-wide and originator specific performance data
- » Protection provided by credit enhancement and liquidity support against defaults and arrears in the mortgage pool
- » The roles of the swap and hedging provider
- » The legal and structural integrity of the issue

Treatment of Concerns:

Borrower concentration

There were only 804 borrowers in the final pool of £163.5m with 594 borrowers in the provisional pool. Moreover most of the borrowers are professional property investors with loans originated in a narrow timeframe and so during a housing market downturn Moody's expects the payment performance of different borrowers to be strongly correlated.

Moody's has factored this into the MILAN analysis with the MILAN Aaa CE number of 20.5% including a overall 9.5% adjustment for borrower concentration. The 9.5% borrower concentration stress is composed of a base adjustment of 4.8% per Moody's standard MILAN methodology and a further 4.7% additional adjustment due to the pool being significantly more concentrated than one with 5,000 equally sized borrowers as in Moody's standard methodology.

Additionally Moody's has increased the expected loss compared with existing deals to take into account borrower concentration. The existing Paragon deals have an expected loss of between 1.25% and 1.75% whereas the expected loss is 3.0% for the current deal. This is despite the fact that the maximum indexed LTV is 75%, compared with existing Paragon deals where there are significant portions of the pools in negative equity.

If the £35.3m prefunding had not taken place the pool would have become more concentrated but in mitigation the amounts which had been allocated for prefunding would instead have been used to pay down the notes.

Moody's performed scenario analysis to ensure that the ratings would not have been impacted in such a scenario.

Operational Risk - servicing and cash management:

Paragon is not rated and is the originator, servicer and cash bond manager in the transaction. In mitigation, the deal is in line with Moody's new guidelines on operational risk as there is a warm back-up servicer, a back-up servicer facilitator and a warm back-up cash bond manager in place at closing. It should be noted however that Homeloan Management Limited, who acts as both back-up servicer and back-up cash bond manager, have the right to resign from their functions upon giving written notice. The resignation would become effective on the earlier of (i) 6 months following notification provided that a substitute back-up servicer and back-up cash manager has been found and (ii) 12 months following the notification. In the latter case, if no replacement was found, the transaction would be left without any back-up servicer, therefore causing the deal to be no longer in line with Moody's operational risk guidelines. Ultimately, this could lead to a multi-notch downgrade of the rating of the notes, although this is a remote scenario given the presence of a back-up servicer facilitator. Moody's believes that the role of facilitator to find a suitable third party during this 12 month period, and the additional liquidity available from the Reserve Fund mitigate this risk.

If the servicer fails to provide the calculation report for the cash management within three business days of determination date (which falls 15 days prior to the IPD) then the substitute administrator must immediately assume the performance of the calculation and payment services.

The back-up servicer facilitator would assist the issuer in appointing a replacement cash bond manager to perform the cash bond administration services if the substitute cash bond manager fails to assume the performance of the calculation and payment services within five business days of the servicer failing to deliver a servicer report.

The back-up servicer has undertaken a mapping exercise such that the back-up servicing arrangement was classified as warm from close.

In the event that the back-up servicer either becomes the primary servicer or is no longer able to fulfil the role of back up servicer, the back-up servicer facilitator is responsible for finding a replacement back-up servicer.

To mitigate against the increased operational risk there is five months of liquidity to pay the senior fees and debt servicing costs on the rated notes assuming Libor of 5.7%.

Due to the presence of netting within the fixed – floating swap agreement there will be cash available to pay the

issuer's side of the swap agreements in line with the rating assigned.

To ensure continuity of payments both the terms and conditions of the notes and the swap documents contain estimation language whereby the cashflows will be estimated from the three most recent servicer reports should a current servicer report not be available.

However, should no servicing report be available and amounts in the principal and revenue waterfalls require to be estimated then it is possible that cash is will leak out of the transaction.

Operational risk: tax and pension claims

Potential secondary tax liabilities: The issuer of the transaction is a subsidiary of the Paragon Group and part of the Paragon VAT group and two further tax groups. In the event of an insolvency of a member of the group, the tax authorities would generally not have recourse to the issuer for any unpaid tax. However there are limited exceptions to this rule the most significant of which (i) those relating to changes in ownership of companies with the group and (ii) unpaid tax attributable to non-UK resident group companies. Given the current structure of the Paragon Group, Moody's is satisfied that no such liabilities will arise and so the risk of claims being made against the Paragon SPVs by the tax authorities to be so low as to have no rating impact.

Pensions claims: Paragon Finance is the operator of a defined benefit occupational pensions scheme. Under the provisions of the Pensions Act 2004, the Pensions Regulator can, in certain circumstances, make a claim against a company "connected with" or an "associate of" the operator of such a scheme. The issuer qualifies as being a connected or associated entity, as it is part of the Paragon Group.

The Pensions Regulator may only make such a claim if it considers it to be reasonable to do so and must take into account certain matters when making its pre-claim assessment. While it is not certain that any of these matters could reasonably be applied to the issuer, it is arguable that they do receive some benefits from their relationship with Paragon Finance. Therefore, although Moody's consider the risk to be low, we cannot exclude the possibility of the Pensions Regulator making a claim against the issuer. However, if the pensions regulator were to institute insolvency proceedings against the issuer, it could recover a maximum of £600k out of floating charge realisations in priority to secured creditors. It would also be entitled to amounts remaining (if any) after all secured creditors had been paid in full.

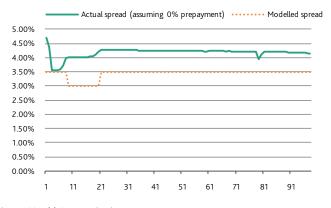

The risk of a claim by the Pensions Regulator is mitigated in this transaction as there is only one class of noteholders meaning it will be easier to obtain noteholder consent to settlement. Additionally one of the key risks with insolvency of an issuer is that swap agreements could terminate. This is not however a significant risk for this transaction as there is only one fixed – floating swap until October 2013 providing only limited support to the deal.

Moody's has assessed the possibility of a pensions claim being made against the issuer when it is already subject to insolvency proceedings as a result of a separate claim as being remote and having no ratings impact. This consideration follows a recent decision of the Court of Appeal in the Nortel case, which confirmed that liabilities incurred as a result of a claim by the Pensions Regulator made against a company in insolvency, will rank as expenses of the insolvency ahead of the claims of floating charge-holders. Please see "Paragon Transactions' Potential Exposure to Pensions Liabilities Cannot be Excluded from Rating Analysis" for more details.

Absence of SVR swap and minimum margin requirement risk

Although there is a commitment that the servicer should set the SVR rate such that the asset yield will be 4% above Libor pre October 2016 and 4.5% above Libor after this date, Moody's is of the view that this will not be enforceable in all circumstances as it could be deemed unfair as the borrowers do not have power to renegotiate terms and there is no mention of proportionality. Moody's has stressed the yield as shown in the chart below. A lower haircut has been applied in the first two years due to the presence of Libor linked loans and the swap which is in place for the fixed rate loans.

Actual spread versus Moody's stressed spread

Source: Moody's Investors Service

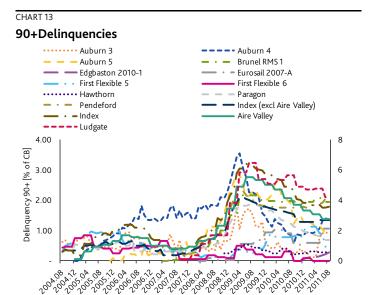

Prefunding:

Subject to certain conditions the structure allowed additional loans to be added in the six months following close. Prefunding in the deal was 21.5% of the principal amount of the notes issued. The risk of asset deterioration and increased borrower concentration was mitigated by criteria governing the addition of new mortgages. These included:

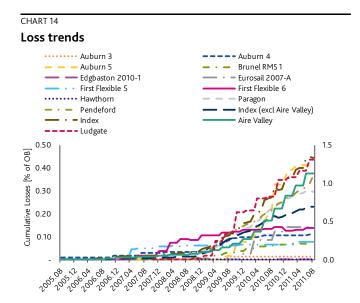

- » Moody's rating agency confirmation;
- » Average loan to value of the overall portfolio does not exceed 70.5%;
- » Weighted average interest coverage ratio determined in accordance with lending criteria guidelines) does not fall below 152%;
- » Top 20 borrowers does not exceed £16,563,190 (equivalent to value in provisional pool);
- » All new loans are to unique borrowers;
- » An additional AUP is carried out; and
- » No enforcement notice

Benchmark Analysis

UK Buy-to-let sector Performance: In Moody's view, the historical performance of 90+ delinquencies and losses of Paragon transactions compares positively to other recent transactions in this sector. Please see below Moody's BTL index:

^{*} As per Moody's calculation

^{*} Margin after all loans reset.

 $[\]ensuremath{^{**}}$ As per Moody's MILAN methodology for Aaa scenario for a benchmark loan.

[§] Of original note balance.

Parameter Sensitivities

Parameter Sensitivities provide a quantitative, model-indicated calculation of the number of notches that a Moody's-rated structured finance security may vary if certain input parameters used in the initial rating process differed. The analysis assumes that the deal has not aged. It is not intended to measure how the rating of the security might migrate over time, but rather, how the initial rating of the security might differ as certain key parameters vary. For more information on V Score and Parameter sensitivity methodology for RMBS, please refer to "V Scores and Parameter Sensitivities in the Major EMEA RMBS Sectors" published in April 2009.

Parameter sensitivities for this transaction were calculated in the following manner: Moody's assumed 16 loss distributions derived from the combinations of MILAN Aaa Credit Enhancement: 20.5% (base case), 24.6% (base x 1.2), 28.7% (base x 1.4) and 32.8% (base x 1.6) and expected loss: 3.0% (base case), 4.5% (base x 1.5), 6.0% (base x 2) and 9.0% (base x 3). The 3.0% / 20.5% scenario would represent the base case assumptions used in the initial rating process.

The tables below show the parameter sensitivities for this transaction with respect to all Moody's rated tranches.

TABLE 2*

Tranche A

MILAN	Aaa	CE	Output	į
-------	-----	----	--------	---

		20.5%	24.6%	28.7%	32.8%
Median	3.0%	Aaa*	Aa1(1)	Aa1(1)	Aa1(1)
Expected	4.5%	Aaa(0)	Aa1(1)	Aa1(1)	Aa2(2)
Loss	6.0%	Aaa(0)	Aa1(1)	Aa2(2)	Aa3(3)
	9.0%	Aaa(0)	Aa1(1)	Aa3(3)	A1(4)

^{*} Results under base case assumptions indicated by asterisk ' * '. Change in modelindicated rating (# of notches) is noted in parentheses.

Worse case scenarios: At the time the rating was assigned, the model output indicated that although Class A notes would still achieve a Aaa rating if expected loss was as high as 9%, there is greater sensitivity to increases in the MILAN Aaa CE. If the MILAN increased to 24.6% and all other factors remained the same, the model output indicates Aa1.

Monitoring

Moody's will monitor the transaction on an ongoing basis to ensure that it continues to perform in the manner expected, including checking all supporting ratings and reviewing periodic servicing reports. Any subsequent changes in the rating will be publicly announced and disseminated through Moody's Client Service Desk.

Originator Linkage: Paragon acts as originator, seller and cash manager. However it is in line with Moody's recently published criteria on operational risk which delinks the transaction from Paragon's credit risk.

Significant Influences: In addition to the counterparty issues noted, further deterioration in the housing market beyond that modelled may have an impact on the subject transaction's ratings.

Counterparty Rating Triggers	Condition	Remedies
Interest Rate Swap	In accordance with	
Counterparty	Moody's swap	
	guidelines*	
Issuer Account Bank	Loss of P-1	Replace
Collection Account Bank	Loss of P-1	Replace

Loan repurchase following breach of representations and warranties (R&W):

» If material breaches of R&W have not been remedied within 28 days of being notified by the Issuer of such breaches, the Seller shall repurchase the loan from the Issuer.

Monitoring Report:

Data Quality:

- » Investor report format is currently being finalised.
- The report is in line with previous Paragon deals and is in line with other transactions in the sector.
- » Undertaking to periodically provide Moody's with updated pool cut once a quarter.
- » Loan modifications for arrears management is not reported separately.
- » Further advances are reported in the investor reports.

Data Availability:

- » Report provided by: Moorgate Asset Administration Limited
- » The timeline for investor report is provided in the transaction documentation, The priority of payment section is published on the IPD.
- » The investor report is expected to be completed no later than 30 days following the end of the relevant collection period.
- » The frequency of the publication of the investor report is quarterly and the frequency of the IPD is quarterly.
- » Investor reports are publicly available on a website.

Representations and Warranties

The Rule 17g-7 Report of Representations and Warranties is hereby incorporated by reference and can be found at http://www.moodys.com/viewresearchdoc.aspx?docid=PBS_SF267546.

Appendix 1: Summary of Originator's Underwriting Policies and Procedures

Originator Ability	At closing
Sales and Marketing Practices	
Origination channels:	90% brokers, 10% direct customer enquiries
Role of the intermediaries/brokers:	The intermediary acts as the applicants adviser and submits application information only. Any validation is carried out by Paragon.
Frequency of intermediaries/brokers monitoring:	Brokers are subject to initial due diligence and monitoring of performance is ongoing.
Compensation/ incentive structure of sales team (brokers/intermediaries and branches):	Intermediaries are paid a procuration fee for introducing an application typically between 0.5% and 0.75% of the loan on completion. Paragon regional managers are compensated with a mix of basic salary and bonus. The bonus will typically equate to 25% of basic salary.
Separation and independence of sales and approval function:	Sales and underwriting operate independently and report through separate directors. Sales have no mandate.
Underwriting Policies and Procedures	
% of loans automatically underwritten (i.e. without manual approval):	0% - All loans are written based upon manual approval. The system based underwriting system is designed to filter applications and assist the underwriter, not replace them.
% of loans manually underwritten:	100%
Back-testing of automatic underwriting/internal score (if applicable):	Both manual and credit score assisted processes are reviewed on an ongoing basis and credit reports produced monthly to the Group Credit Committee.
Average experience in underwriting or tenure with company:	14% 0-5 years , 21% 5-10 and 64% with 10+ years experience / tenure (please delete what is not relevant)
Ratio of loans underwritten per FTE[1] per day:	Within a range 2-4.7 (depending on complexity)/day
Criteria for compensation of underwriters:	Underwriters are compensated on basic salary only (no performance related bonus) and also participate in a Group wider profit related pay scheme which pays an annual sum based on a distribution of 1% of the Group's gross profit. The average over the last 5 years per employee was:£1406
Approval rate:	The approval rate is circa 40%
Mandate/lending authority for first level underwriter/personnel:	£200k 75%LTV% - is the lowest level mandate authority.
Percentage of exceptions to underwriting policies:	There are no exceptions to underwriting policy
Process and tools for the borrower identity check:	The solicitor acting for Paragon is required to complete identity checks in line with UK anti-money laundering regulation. In addition - data supplied by the credit reference agencies is used to check for M/L compliance.
Fraud prevention tools and % of applicants checked for fraud:	100% All cases are checked against Sira & Cifas databases.
Source of credit history checks:	Equifax and Credit safe are used as suppliers of consumer and commercial credit data within the underwriting process. All personal applicants and all corporate applicants are searched using these systems.
Credit history requirements:	No material adverse credit
Use of external credit bureau scores:	Personal Applicant -Equifax - Risk Navigator score - 320. Corporate applicants - Credit Safe - 30
Use of internal credit scores:	None
Methods used to assess borrowers' repayment capabilities:	All mortgages are BTL. A minimum interest coverage ratio is used to assess affordability. The monthly rental payment at inception should be no less than 125% of the mortgage payment.
Income taken into account in affordability calculations:	Other income information is collected and may be validated in the underwriting process but is not relied upon in the affordability assessment
Other borrower's exposures (i.e. other debts) t taken into account in affordability calculations:	Information on other debts and liabilities is collected and recorded and may be taken into account but the affordability assessment is driven by the property information.
Is interest rate stressed to calculate affordability? Is amortisation modified to calculate affordability for I/O/balloon loans?	The interest coverage ratio is set at a minimum of 25% above the mortgage payment No
Method used for income verification	Rental income is assessed by the Group's surveyor
Criteria for non income verified and %:	not applicable
Maximum age at maturity & assessment of income for pensioners:	
Maximum loan size:	£5m (in aggregate)
Valuation types used for purchase & LTV limits:	Full physical inspection 75%
Valuation types used for remortgage & LTV limits:	Full physical inspection 75%
Valuation types used for further advances & LTV limits:	Full physical inspection 75%
Valuation types & procedure for construction loans & LTV limits:	Not applicable

Originator Ability	At closing
Valuation types & procedure for new built properties & LTV limits:	Full physical inspection 75%
LTV limit for first-time-buyers/Buy-to-let/other (please specify and delete non relevant criteria):	Maximum loan to value 75%, please see full product information and lending criteria on the Paragon website
Collateral Valuation Policies and Procedures	
Value in the LTV calculation for underwriting purpose:	Lower of the purchase price or valuation
Value in the LTV recorded in database system if different than above	Lower of the purchase price and valuation (separately the purchase price)
Type, qualification and appointment of valuers:	Internal Surveyors Team (all RICS qualified 15yrs post qualified experience). Where necessary Paragon will instruct a panel surveyor (all RICS qualified) but these will be subject to a 100% audit by the internal surveyors function.
Monitoring of quality of valuers: Closing Policies and Procedures	All valuations subject to a regular random audit conducted by senior audit surveyor.
Quality check before releasing funds:	[Letter/phone] calls to confirm borrower information, validation that insurance is in place, check with notary, etc.
Entity responsible for the deed registration & time needed:	The solicitor acting for Paragon will register the charge in accordance with Paragon's instructions to solicitors
Data quality check (check that system and paper file match):	100%, via Image system
Credit Risk Management	
Credit risk team employees and experience:	Credit risk team runs with two senior, experienced staff and 4 analysts. Director of team has 24 years with Paragon, Head of Dept has 8 years with Paragon (20 years in total in credit risk industry). 1 new analyst with remaining having a minimum of 5 years experience.
Reporting line of Chief Risk Officer :	Finance Director
Ability to track loan performance by specific loan characteristics?:	Yes, performance can be tracked by any characteristic recorded on Paragon system. E.g. originator, valuer, solicitor, loan size, score etc.
* FTE: Full Time Equivalent	
Originator Stability:	At closing
Quality Controls and Audits	
Responsibility of quality assurance:	Independent team (part of team of 4)under the control of a team leader (separate to the underwriting area)
Number of files per month being monitored:	100% audit post offer and post completion with findings passed back to underwriting team leader on a monthly basis.
Recording of quality assurance findings and analysis of causes:	Yes and Yes
Frequency of operational audits for the underwriting processes:	Annually
Management Strength and Staff Quality	
Average turnover of underwriters:	20%
Training of new hires and existing staff:	Buddy principle - mixing training with 4 eye review (finally hierarchical mandate approval process). Then ongoing review for quality.
Technology	
Main software used:	ARIES is the core component of the Paragon First Mortgage systems that support all phases of flexible, repayment, endowment, rest or interest only mortgage operations, from initial application processing through servicing, accounting and collections. There are interfaces to the general ledger accounting System 21 and to various administrative systems used by finance and treasury operations. The software schedule is operated through ROBOT. A monthly process known as the collection run calculates the monthly interest owed by the customer, generates insurance premiums and creates an extract file of customer payments to be submitted to BACS. Overnight, weekly and monthly process produces reports and statistical information on redemptions, mortgage arrears and insurance premiums.
Tools/infrastructure available:	See below.
Back-up server synchronisation and distance from main server:	Paragon uses two IBM iSeries (formerly known as AS/400) computers to operate all its product application, account administration and general ledger systems. The iSeries used for front line production is known as LEOPARD and is a RISC processor series 550 with 24Gb memory and 1.8Tb RAID disk. This server is located in the primary computer room in St Catherines Court (3.4 miles from the administration operations campus).
Frequency of disaster recovery plan test:	Paragon are BS25999 certified. BCP tests are conducted frequently. The last DR test was 24 August 2010.

Originator Stability:	At closing
Securitisation related	
%age of book securitised	As at September 10, the securitised assets, as a percentage of the buy to let assets, was approximately 82%.
Previous experience with buy backs from securitisations	There have been no repurchases this year. Historically, there has been one repurchase where the solicitor failed to register Paragon's charge.

Appendix 2: Summary of Servicer's Collection Procedures

Servicer Ability	At closing
Loan Administration	
Entities involved in loan administration:	None
Abandonment rate (% call not answered within 20 seconds):	<3%
Early Arrears Management	
Entities involved in early stage arrears:	Internal Collections team
Hours & days of operation:	Mon to Fri 8am to 8pm. Sat 8am to 5pm
Ratio of loans per collector (FTE)[1]:	Approx 350
Definition of arrears & default	Any amount missed
Pre-arrears strategy: Do you contact the borrower to remind that the payment prior to account is due?	Yes
Pre-arrears strategy: If yes, how do you select the account to be called,	Behavioural analysis and proactive arrangement contact
Arrears strategy for 1-29 days delinquent (please select and if needed customise the relevant option)	From Day 1 - letter sent & collection calls (3 per day), supported with Field Calls and daily attempts at contact
Arrears strategy for 30 to 59 days delinquent (please select and if needed customise the relevant option)	From Day 30 - as above
Arrears strategy for 60 to 89 days delinquent (please select and if needed customise the relevant option)	From Day 60-90 Receiver-of-Rent appointed
Arrears strategy for 90 days or more delinquent to late stage (please select and if needed customise the relevant option)	Receiver-of-Rent appointed
Prioritisation rules for delinquent accounts:	Level of arrears, type of portfolio, payment type missed
Use of historical payment behaviour in the collection strategy:	Aged history used showing arrears now, previous month and previous year
Data enhancement if borrower is not contactable:	Field calls, directory enquiries, bank letters and trace companies
Reason for non-payment:	Arrears reason code data collected
Loss Mitigation and Asset Management Practices:	
Transfer of a loan to the late stage arrears team:	Receiver-of-Rent from Day 60 and Pre-Salvage where forecast loss at Day 60
Entities involved in late stage arrears:	Collections, Portfolio Relationship, Receiver, Field Team
Entities involved in loss mitigation	Portfolio Relationship, Pre-Salvage, Receiver, Litigation, Negligence review, external solcitors
Hours & days of operation:	Same as collections
Ratio of loans per collector (FTE):	Included in previous figure for collections
Analysis performed to assess/propose loss mitigation solutions:	Review including LTV, interest due vs. interest paid, pre-salvage review, information from PRM visits and negligence review
Types of loss mitigation solutions including percentage defined as the number of accounts which were 30+ delinquent for which one solution has been applied divided by the total number of accounts which were 30+ delinquent over the past 12 months.	N/a
Role of field agents:	Supporting Receiver-of-Rent in tenant contact and property management
Borrowers re-defaulting 90 days or more after loss mitigation:	N/a
Contact with borrower during the legal process:	N/a
Time from first default to litigation and from litigation to sale:	N/a
Average recovery rate on closed files, recovery time and change in price of properties sold:	N/a

Management and Staff	
	Management 10 up. Callections staff 14 up and Customer Consider staff 7 up
Average experience in servicing or tenure with company:	Management 18 yrs, Collections staff 14 yrs and Customer Service staff 7 yrs
Yearly turnover rate:	1% in 12 months
Criteria for compensation/reward:	Basic salary and part incentive for collections staff
Training of new hires specific to the servicing function (i.e. excluding the company induction training):	Personalised training plan
Training for existing servicing staff:	Regular training including 2 sessions per week
Quality control and audit	
Responsibility of quality assurance:	Collection Managers
Number of files (and calls) per agent per month being monitored:	A random daily audit is undertaken by the Collection Managers in respect of Mandate, DPA PSA (problem, Solution Action)and the timing in respect of actioning certain accounts
Recording of quality assurance findings and analysis of causes:	Please see above
Frequency of operational audits for the servicing processes:	Yes - Please see above
Operating manual available to servicing staff:	Yes, this is available on a Lotus Notes Database
IT and Reporting	
Main software used and its operating manual:	ARIES is the core component of the Paragon First Mortgage systems that support all phases of flexible, repayment, endowment, rest or interest only mortgage operations, from initial application processing through servicing, accounting and collections. There are interfaces to the general ledger accounting System 21 and to various administrative systems used by finance and treasury operations. The software schedule is operated through ROBOT. A monthly process known as the collection run calculates the monthly interest owed by the customer, generates insurance premiums and creates an extract file of customer payments to be submitted to BACS. Overnight, weekly and monthly process produces reports and statistical information on redemptions, mortgage arrears and insurance premiums.
Tools/infrastructure available:	Please see above
Automatic tracking and reporting of specific characteristics:	Generic Event management System (GEMS)
Back-up server synchronisation and distance from main server:	Paragon uses two IBM iSeries (formerly known as AS/400) computers to operate all its product application, account administration and general ledger systems. The iSeries used for front line production is known as LEOPARD and is a RISC processor series 520 with 8Gb memory and 1Tb RAII disk. This server is located in the primary computer room in St Catherines Court (3.4 miles from the administration operations campus).
Frequency of disaster recovery plan test:	Paragon are BS25999 certified. BCP tests are conducted frequently. The last DR test was 24 August 2010.

All information contained herein is obtained by MOODY'S from sources believed by it to be accurate and reliable. Because of the possibility of human or mechanical error as well as other factors, however, all information contained herein is provided "AS IS" without warranty of any kind. MOODY'S adopts all necessary measures so that the information it uses in assigning a credit rating is of sufficient quality and from sources MOODY'S considers to be reliable including, when appropriate, independent third-party sources. However, MOODY'S is not an auditor and cannot in every instance independently verify or validate information received in the rating process. Under no circumstances shall MOODY'S have any liability to any person or entity for (a) any loss or damage in whole or in part caused by, resulting from, or relating to, any error (negligent or otherwise) or other circumstance or contingency within or outside the control of MOODY'S or any of its directors, officers, employees or agents in connection with the procurement, collection, compilation, analysis, interpretation, communication, publication or delivery of any such information, or (b) any direct, indirect, special, consequential, compensatory or incidental damages whatsoever (including without limitation, lost profits), even if MOODY'S is advised in advance of the possibility of such damages, resulting from the use of or inability to use, any such information. The ratings, financial reporting analysis, projections, and other observations, if any, constituting part of the information contained herein are, and must be construed solely as, statements of opinion and not statements of fact or recommendations to purchase, sell or hold any securities. Each user of the information contained herein must make its own study and evaluation of each security it may consider purchasing, holding or selling.

NO WARRANTY, EXPRESS OR IMPLIED, AS TO THE ACCURACY, TIMELINESS, COMPLETENESS, MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OF ANY SUCH RATING OR OTHER OPINION OR INFORMATION IS GIVEN OR MADE BY MOODY'S IN ANY FORM OR MANNER WHATSOEVER.

MIS, a wholly-owned credit rating agency subsidiary of Moody's Corporation ("MCO"), hereby discloses that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by MIS have, prior to assignment of any rating, agreed to pay to MIS for appraisal and rating services rendered by it fees ranging from \$1,500 to approximately \$2,500,000. MCO and MIS also maintain policies and procedures to address the independence of MIS's ratings and rating processes. Information regarding certain affiliations that may exist between directors of MCO and rated entities, and between entities who hold ratings from MIS and have also publicly reported to the SEC an ownership interest in MCO of more than 5%, is posted annually at www.moodys.com under the heading "Shareholder Relations — Corporate Governance — Director and Shareholder Affiliation Policy."

Any publication into Australia of this document is by MOODY'S affiliate, Moody's Investors Service Pty Limited ABN 61 003 399 657, which holds Australian Financial Services License no. 336969. This document is intended to be provided only to "wholesale clients" within the meaning of section 761G of the Corporations Act 2001. By continuing to access this document from within Australia, you represent to MOODY'S that you are, or are accessing the document as a representative of, a "wholesale client" and that neither you nor the entity you represent will directly or indirectly disseminate this document or its contents to "retail clients" within the meaning of section 761G of the Corporations Act 2001.

Notwithstanding the foregoing, credit ratings assigned on and after October 1, 2010 by Moody's Japan K.K. ("MJKK") are MJKK's current opinions of the relative future credit risk of entities, credit commitments, or debt or debt-like securities. In such a case, "MIS" in the foregoing statements shall be deemed to be replaced with "MJKK". MJKK is a wholly-owned credit rating agency subsidiary of Moody's Group Japan G.K., which is wholly owned by Moody's Overseas Holdings Inc., a wholly-owned subsidiary of MCO.

This credit rating is an opinion as to the creditworthiness of a debt obligation of the issuer, not on the equity securities of the issuer or any form of security that is available to retail investors. It would be dangerous for retail investors to make any investment decision based on this credit rating. If in doubt you should contact your financial or other professional adviser.
